

Clean Seas

Ballast Water

Clean seas is North's loss prevention initiative to promote good practice and compliance with environmental legislation.

Clean seas demands careful planning to ensure safe and successful ballast water exchange.

Clean seas are dependent on crew familiarisation with the operator's Ballast Water and Sediments Management Plan and the onboard ballast water exchange procedures for their vessel. Additional training may be required.

Clean seas require the proper disposal and recording of ballast water and sediment residues through approved reception facilities if available.

Clean seas can only be achieved by adopting good working practices on board.
