

Clean Seas STS

Clean seas is North of England's loss prevention initiative to promote good practice and compliance with environmental legislation.

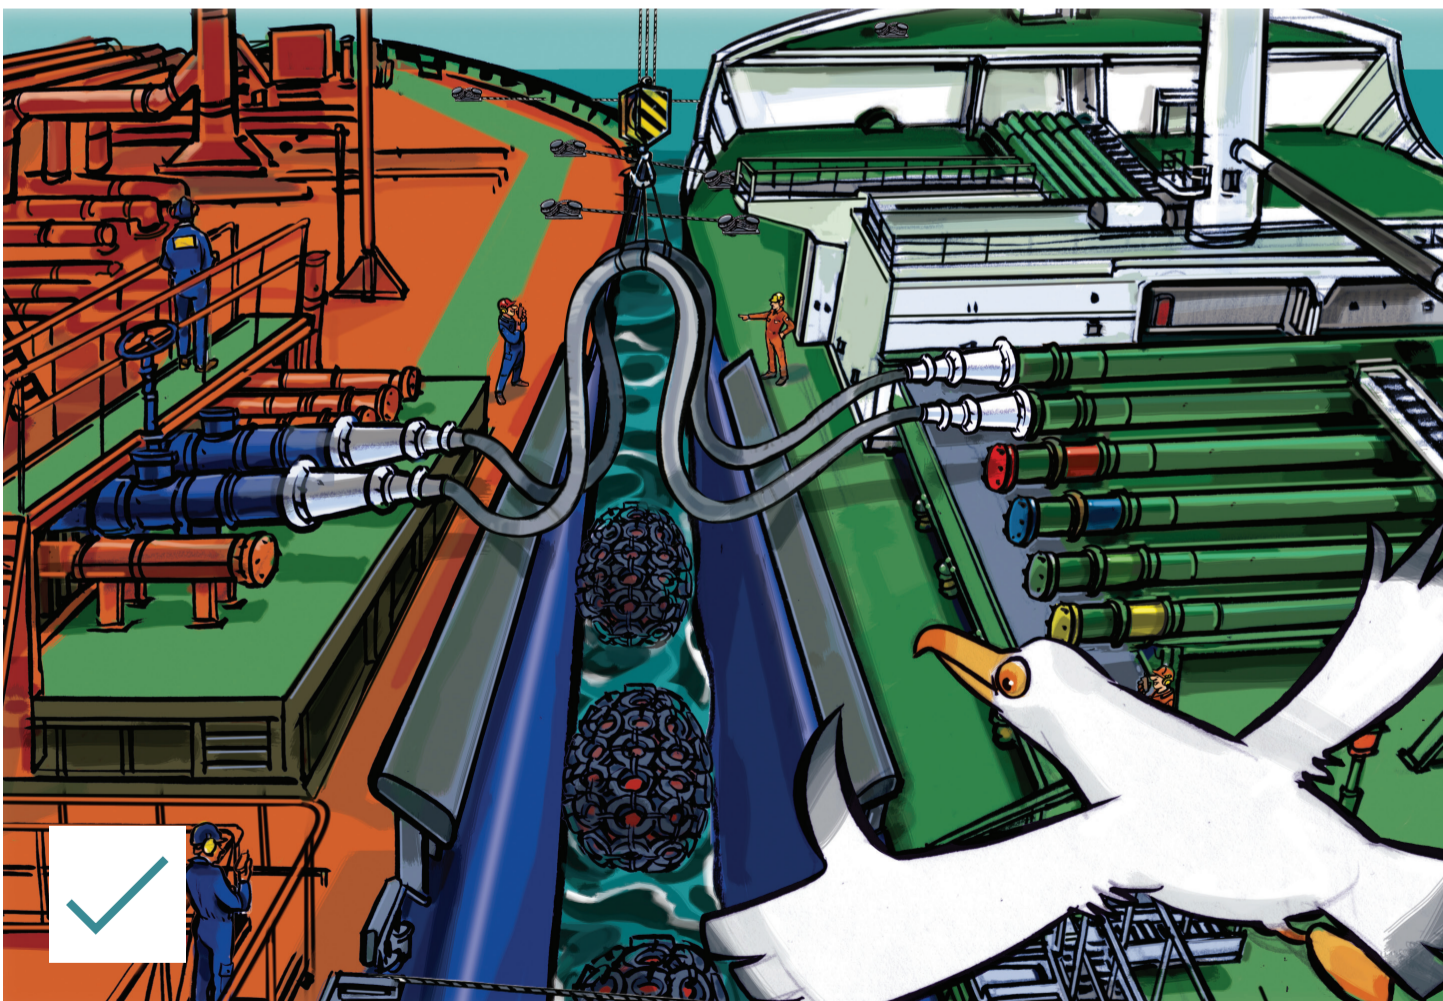

Clean seas require vessels conducting ship to ship operations to have an STS operations plan in place that is in approved by their Flag State administration.

Clean seas demand that there is a person in overall advisory control of the STS operation that is properly qualified to perform all relevant duties.

Clean seas are dependent on properly trained personnel on deck who have been fully briefed prior to the operation commencing.

Clean seas are dependent on deck equipment, including transfer hoses, fenders and moorings, being properly rigged, utilised and certified for their specific function.

Clean seas can only be achieved by adopting good working practices on board.
