Safety... All At Sea?

Heavy seas, a fast-paced working environment and compact working areas can present various hazards when working on deck. How many hazards and examples of poor practice can you spot?

- Always maintain good housekeeping - keep it tidy.
- Keep working areas and walkways clear.
- Keep the vessel weathertight and watertight: hatches and doors to stay closed at sea.
- Properly secure gear and equipment - be prepared for heavy weather.
- Keep one hand for yourself and one for the boat.
- Wear the right clothes for the job and conditions.
- Use the correct personal protective equipment (PPE).
- Wearing a personal flotation device (PFD) could save your life.
